

## TouchTable™ Announces the release of the TouchTable™ Software Development Kit version 4.0

Pasadena (04/30/10). TouchTable™, Inc. today announced the introduction of the TouchTable™ Software Development Kit (version 4.0), featuring enhanced capabilities for development of software applications on TouchTable systems. This addition to the TouchTable software product family allows developers to create 3<sup>rd</sup> party applications for use on TouchTable's line of interactive, multi-touch displays.

The TouchTable SDK makes available a full set of libraries, sample code and help files for developers working in the .NET environment and facilitates the creation of user interfaces, multi-touch input commands, menus, animation effects and networking tools on TouchTable systems. The TouchTable SDK features easy to use libraries, sample projects and example code to help developers get started quickly.

“With an improved user interface, more code examples, and better organization, TouchTable SDK 4.0 represents the next step in support of our customers as they continue to grow in their use and sophistication of the collaborative visual environment,” said Rocky Rocanova, CEO of TouchTable, Inc.

### **Comprehensive Code Examples**

TouchTable SDK v4.0 greatly increases and improves on the code examples in the developer documentation. In-line callouts in the examples allow developers to quickly understand and assimilate code to easily leverage all available features for their platform.

### **Included TouchToolkit**

Version 4.0 extends the capabilities of the SDK by including a TouchToolkit for rapid prototyping of widgets and tools. Developers can quickly create tools on an as-needed basis and then, if required, easily incorporate these tools into production code.

### **Diagnostics Tools**

The SDK also includes a set of diagnostic tools that help developers better log and diagnose issues in the touch environment. These additional tools augment traditional development debugging environments by allowing developers to review logs without having to leave the touch-interface environment.

The TouchTable SDK v4.0 is available immediately by contacting TouchTable Inc. at [info@touchtable.com](mailto:info@touchtable.com).

### **About the TouchTable™, Inc.**

TouchTable designs, develops, manufactures, sells and supports resellers, partners and customers and provides system integration and consulting for TouchTable systems and software. The TouchTable family of products provides a rich environment for visualization, navigation and analysis of complex datasets in the Defense and Intelligence, Oil and Gas, Public Safety, Homeland Security, Telecommunications and Health and Human Services fields. TouchTable is headquartered in Pasadena, California. Learn more about TouchTable, Inc at <http://www.touchtable.com> or [info@touchtable.com](mailto:info@touchtable.com).
